

Axis genes across the locked primary contrasts (bulk)

tile color = log2 FC; black border = BH-FDR < 0.05; last column = paired arm (never pooled)

Significant axis-gene cells in scRNA pseudobulk

21 of 715 measured cells pass BH-FDR < 0.05 (all in GSE214411)
blank = not significant (absence is measured, not dropped)
